

Internexia Sdn Bhd was involved in the recent Permata Carnival organized by the Prime Minister's Department. The carnival was held over three days from 10 – 12 December 2011.

The Permata Insan programme was formed with the intention of nurturing and educating specially selected talented children. The objective is to groom these children to become prominent Islamic scholars who would spearhead various fields such as mathematics, astronomy and medicine, besides others, based on the teachings of the Quran and Sunnah.

Five Permata groups of varied focuses and scopes contributed to the success of the Permata Carnival. These are Permata Negara, Permata Insan, Permata Seni, Permata Pintar and Perkasa Remaja.

Internexia was the only participating company which developed and showcased an online learning management system (LMS), more popularly known as an intelligent Learning Environment (iLE) for the Permata Insan programme.

The iLE can be used in a variety of ways to ensure that the student is at the heart of learning and is supported by the best available technology. Personal and shared tools include: wiki, blog, forum, web feed, calendar, media cast, SCORM, glossary, web link, test and surveys.

The Carnival made it possible for Internexia to share the purpose of the Permata Insan as well as the advantages of using an iLE.
